

Medication Visit within 14 Days of Admission

Establishment of Benchmark: May 08 to Oct 08

Printed Date: 4/26/2009

Benchmark finalized on 02/24/2009 for data last updated on 02/24/2009

Report Description:

Measure: Medication Visits (ICIS code 304) within 14 Days of Admission

The information provided in this report reflects the number of times a medication visit occurred within 14 days of each admission. The monthly reporting period begins 14 days before the first of the month and ends 14 days before the last day of the month. As an example, 'January 2008' reflects the number of admissions between December 17, 2007 and January 17, 2008 that received a medication visit within 14 days of admission. In order to be included, an individual must have received at least one service other than an assessment from contract sources Community Mental Health (01) or Medicaid Services for which DMHSAS Pays Match, Adults (50) within the first month of admission. A medication visit is also counted if it occurs within 30 days prior to admission.

The intent of this report is to identify the benchmark and present a summary of the data that determined the different levels of the benchmark.

Exclusions:

1. PACT clients
2. Persons under 18 years of age on the date of service
3. Discharge code 68 (Death) or 65 (Incarcerated) occurs prior to 14 days from admission
Note: if the medication visit takes place prior to discharge, the medication visit is counted
4. Clients with Medicare at admission are excluded, unless a medication visit is reported within 14 days
5. Data that is missing, invalid, or does not fit the criteria

Definitions:

Received a Medication Visit within 14 Days: A medication visit did occur with 14 days of admission.

Percent: The number of admissions that were followed by medication visits within 14 days divided by the provider's total number of admissions x 100.

Average: The arithmetic mean of the data. In a data set, the mean is the sum of the data divided by the number of data points.

Standard Deviation: A measure of the dispersion or spread of the data. One standard deviation above and below the average determines the upper and lower limits.

Upper Limit: Average plus one standard deviation.

Lower Limit: Average minus one standard deviation.

Benchmark: A standard by which providers may be measured or judged.

How the Benchmark is Determined:

The benchmark is determined by the distribution of data from all 15 Community Mental Health Centers for a period of six months (05/01/2008 - 10/31/2008). From these data points, the average and standard deviations were calculated. These statistics were then used to establish the benchmark. The benchmark is utilized to assess monthly performance.

Benchmark categories are based on the average and upper and lower limits, as established in this report:

None: No points are awarded to an agency with a percentage below the lower limit.

One Point: An agency will receive one point when its monthly performance percent falls below the average but on or above the lower limit.

Two Points: An agency will receive two points when its monthly performance percent equals or exceeds the average.

Bonus: Bonus points will be awarded to providers whose monthly percentage equals or exceeds the upper limit.
