Regional Performance Management Report For 1st Quarter of FY2005

Overview of the 1st Quarter of FY06

Mental Health Treatment:

The statewide rate of outpatient follow-up within seven days of discharge from inpatient treatment (measure MH4) decreased from the previous quarter's rate of 51% to 44%. Three of the sixteen agencies demonstrated an increase in the level of outpatient follow-up from the previous quarter.

For measure MH11, the rate of adults with a major mental illness (MMI) receiving case management or individual rehabilitation services rose slightly from 49% to 50%; producing the highest rate statewide for the two-year period. Eight of the fifteen agencies showed an improvement in the percent of clients receiving case management or individual rehab services.

Substance Abuse Treatment:

One agency, MONARCH, exceeded the goal of 45% for clients initiating treatment within 14 days of discharge from detox services in the 1st Quarter of FY06 (measure SA2b). The percentage of clients, statewide, fell slightly from 22% in the previous quarter to 19% in the 1st Quarter of FY06. Three of the six agencies demonstrated increases in the most recent quarter studied.

Engagement into a lower level of care following discharge from residential treatment fell slightly from 11% to 10.8%, statewide (measure SA3c). Four agencies met the goal of 17% engagement into a lower level of care and four of the seventeen agencies increased their rates from the previous quarter.
